American BOA, a engineering and manufacturing company providing decouplers for the automotive industry was rapidly expanding. With the purchase of an additional existing manufacturing and office building, renovation was required to provide space for their corporate offices, engineering design and manufacturing plant.

The design solution highlights the industrial nature of the business through exposed structure and metal detailing. The lobby highlights a two-story open space with a formal stair. Display niches in the lobby highlight the manufacturing process and product. The engineering open offices are positioned to take advantage of natural light. To promote communication, managerial offices have visual access to both the engineering group and manufacturing plant.

The manufacturing plant renovations included robotic assembly cells, exhaust system testing lab and bar-code high bay storage solutions.
